

HTML Images

1. Introduction to HTML Images

Images are an important part of web pages. They help make websites visually appealing, improve user experience, and convey information effectively. In HTML, images are displayed using the `<img>` tag.

2. The `<img>` Tag

The `<img>` tag is used to embed images in an HTML page. It is an empty tag, meaning it does not have a closing tag.

Basic Syntax:

```

```

3. Important Attributes of `<img>` Tag

3.1 src Attribute

- Specifies the path or URL of the image.
- It is mandatory.

Example:

```

```

3.2 alt Attribute

- Provides alternate text for the image.
- Displayed if the image fails to load.
- Important for accessibility and screen readers.

Example:

```

```

3.3 width and height

- Used to set the width and height of the image.
- Values can be in pixels or percentage.

Example:

```

```

3.4 title Attribute

- Displays tooltip text when the mouse hovers over the image.

Example:

```

```

4. Image File Paths

4.1 Relative Path

Used when the image is inside the project folder.

```

```

4.2 Absolute Path

Used when the image is hosted on another website.

```

```

5. Common Image Formats

- JPEG (.jpg / .jpeg) – Best for photographs
 - PNG (.png) – Supports transparency
 - GIF (.gif) – Supports animation
 - SVG (.svg) – Scalable vector images
 - WebP (.webp) – Modern format with better compression
-

6. Image as a Link

An image can be used as a clickable link by placing it inside an <a> tag.

Example:

```
<a href="https://www.google.com">
```

```
  
```

```
</a>
```

7. Responsive Images

Using CSS

```

```

Using width in percentage

```

```

8. Image Loading Attribute

loading="lazy"

- Delays loading images until they are needed.
- Improves page performance.

Example:

```

```

9. Conclusion

HTML images enhance the appearance and usability of web pages. By using the tag correctly and following best practices, developers can create visually rich and accessible websites.
